1. Executive Summary

1.1 Brief overview of the Business

EthioBiz OS (Ethiopian Business Operating System) is a business management software solution designed specifically for Small and Medium Enterprises (SMEs) in Ethiopia. The platform aims to simplify day-to-day business operations by replacing paper-based record keeping with a digital system that enables business owners to manage their operations efficiently and make informed decisions using real-time business data.

The business will initially launch in **Adama**, with plans to expand to other major cities across Ethiopia as the customer base and operations grow.

1.2 What will we sell or offer?

EthioBiz OS offers a smartphone-based business management system that can operate both **online and offline**, making it suitable for businesses with limited internet access.

The initial Minimum Viable Product (MVP) will include:

- Sales Management
- Inventory (Stock) Management
- Expense Management
- Profit Calculation
- Customer Credit Management
- Business Reports

In the long term, the platform will expand to include additional features such as Employee Management, Supplier Management, Digital Payment Integration, an AI Business Assistant, and Business Analytics, with the vision of becoming a complete digital operating system for Ethiopian SMEs.

1.3 Who are our customers?

Our primary customers are Small and Medium Enterprises (SMEs) operating in Ethiopia. During the initial phase, the business will focus on mini-markets, supermarkets, pharmacies, and retail shops.

To validate the market need, customer interviews were conducted with **20 businesses in Adama**, including **9 mini-markets, 4 supermarkets, and 7 pharmacies**. The research showed that many businesses face

challenges in managing inventory, sales, profits, expenses, and customer credit. Most participants also expressed a need for a simple, affordable business management solution that works on smartphones and can operate without an internet connection.

1.4 How will the business make money?

EthioBiz OS will operate under a **Software as a Service (SaaS)** business model. Customers will pay monthly or annual subscription fees to access the platform.

Additional revenue will be generated through software setup and on boarding services, user training, and customized software development for businesses with specific requirements.

This recurring revenue model provides a sustainable source of income and supports the long-term growth of the business.

2. Business Description

2.1 What does the business do?

EthioBiz OS (Ethiopian Business Operating System) is a business management software platform developed specifically for Small and Medium Enterprises (SMEs) in Ethiopia. Its primary objective is to simplify daily business operations by replacing manual, paper-based record keeping with an easy-to-use digital management system.

The first version (Minimum Viable Product - MVP) includes essential business management features such as Sales Management, Inventory Management, Expense Management, Profit Calculation, Customer Credit Management, and Daily and Monthly Business Reports. The software is designed to work seamlessly on smartphones and can also function offline, making it practical for businesses operating in areas with unreliable internet connectivity.

In the long term, EthioBiz OS aims to become more than just a software application. It seeks to serve as a comprehensive digital operating system that enables Ethiopian SMEs to manage every aspect of their business through a single platform.

2.2 What problem are we solving?

Many small and medium-sized businesses in Ethiopia still rely on paper records or manual calculations to manage their daily operations. These traditional methods are time-consuming, prone to errors, and make it difficult for business owners to access accurate information when making important decisions.

EthioBiz OS addresses several common challenges faced by SMEs, including:

- Difficulty tracking inventory accurately.
- Challenges in recording and monitoring daily sales.

- Inaccurate calculation of profits and business expenses.
- Poor management of customer credit.
- Excessive time spent maintaining paper-based records.
- Limited access to reliable business information for decision-making.

By providing a simple and user-friendly digital solution, EthioBiz OS enables business owners to manage their operations more efficiently and make better business decisions.

2.3 Why is this business important?

Small and Medium Enterprises play a significant role in Ethiopia's economy by creating employment opportunities and contributing to economic growth. However, many SMEs lack access to affordable and practical digital tools that help them manage their businesses effectively.

EthioBiz OS addresses this gap by enabling business owners to:

- Save time through automated business processes.
- Reduce human errors associated with manual record keeping.
- Monitor profits and expenses accurately.
- Manage inventory and customer credit efficiently.
- Make faster, data-driven business decisions.

In addition, the software is specifically designed for the Ethiopian business environment. Its smartphone-based interface, offline functionality, multilingual support, and affordable pricing make it accessible to businesses with varying levels of digital literacy and internet access.

By accelerating the digital transformation of Ethiopian SMEs, EthioBiz OS will improve business productivity, strengthen competitiveness, and contribute to the country's broader economic development.

2.4 Customer validation

Before developing EthioBiz OS, customer interviews were conducted with **20 businesses in Adama**, including **9 mini-markets, 4 supermarkets, and 7 pharmacies**.

The interviews revealed that many businesses struggle to manage inventory, sales, expenses, profits, and customer credit using paper-based records. Respondents also indicated that existing software solutions either do not fully meet their needs or are too complex or expensive for small businesses.

Most participants expressed strong interest in an affordable, smartphone-based business management system that can operate offline. Many stated that they would be willing to subscribe to the service after testing the software, providing early validation of the market demand for EthioBiz OS.

3. Product or service description

3.1 What products or services will we offer?

EthioBiz OS is a business management software solution designed specifically for Small and Medium Enterprises (SMEs) in Ethiopia. The platform helps business owners manage their daily operations through a simple, affordable, and user-friendly digital system.

The initial Minimum Viable Product (MVP) will provide the following core services:

- **Sales Management:** Enables businesses to record, track, and monitor daily sales activities.
- **Inventory (Stock) Management:** Helps businesses manage their stock levels, track available products, and receive alerts when stock is running low.
- **Expense Management:** Allows business owners to record and monitor business expenses.
- **Profit Calculation:** Automatically calculates business profit and loss based on sales and expenses.
- **Credit Management:** Helps businesses record and track customer credit transactions.
- **Business Reports:** Generates daily, weekly, monthly, and yearly business reports to support decision-making.

The software is designed to work effectively on smartphones and supports offline functionality, allowing businesses to continue their operations even when internet access is unavailable.

In the future, EthioBiz OS will expand its services by introducing advanced features such as **AI Business Assistant, Supplier Management, Employee Management, Digital Payment Integration, and Business Analytics**, with the goal of becoming a complete digital operating system for Ethiopian SMEs.

3.2 What makes us valuable to customers?

EthioBiz OS is designed to simplify daily business operations and improve business efficiency. The key value it provides to customers includes:

- Reducing dependency on paper-based record keeping.
- Providing quick access to important business information such as sales, stock, expenses, and profit.
- Helping businesses properly track customer credit and reduce financial losses.
- Automatically generating reports that support faster and more accurate business decisions.

- Allowing businesses to operate using smartphones without requiring expensive computers.
- Supporting offline functionality, reducing dependency on continuous internet access.
- Providing a simple interface that allows users with limited technical knowledge to easily adopt the system.

By solving practical challenges faced by SMEs, EthioBiz OS provides a simple, reliable, and affordable business management solution designed for the Ethiopian market.

3.3 How are we different from competitors?

EthioBiz OS differentiates itself from existing business management solutions through the following advantages:

- It is specifically designed for Small and Medium Enterprises in Ethiopia.
- It is smartphone-based and designed around the needs of local business owners.
- It supports offline usage, making it suitable for areas with limited internet connectivity.
- It supports multiple languages, including Afaan Oromoo, Amharic, and English.
- It offers affordable pricing suitable for SMEs.
- It provides a simple and user-friendly interface that requires minimal technical knowledge.
- It focuses on local business challenges rather than providing a general solution.

In the future, additional features such as supplier integration, AI Business Assistant, and business analytics will further differentiate EthioBiz OS by helping business owners make faster and more accurate decisions.

EthioBiz OS is not only a software product; it is a locally adapted digital business solution built around the real needs and working conditions of Ethiopian SMEs.

4. Market Analysis

4.1 Who are our target customers?

The primary target customers of EthioBiz OS are Small and Medium Enterprises (SMEs) operating in Ethiopia. The initial focus is on businesses that need a simple digital solution to manage their daily operations more efficiently.

The main customer segments include:

- Mini-markets
- Supermarkets
- Pharmacies

- Retail shops
- Cosmetic shops
- Hardware shops
- Stationery shops
- Electronics shops
- Spare parts shops
- Boutiques and clothing stores

During customer interviews, some pharmacies and supermarkets reported that they are already using systems such as **Parse, Dagon, Senet ERP, or other POS solutions**. However, several businesses indicated that they would consider switching to a solution that provides a simpler user interface, offline functionality, and affordable pricing.

In the future, EthioBiz OS will expand its services to other sectors, including restaurants, cafés, bakeries, hotels, clinics, and other businesses that require digital business management solutions.

4.2 Where are we located?

EthioBiz OS will initially launch its operations in **Adama City and surrounding areas**. This location was selected because the initial market research and customer validation activities were conducted there, allowing the business to better understand customer needs and provide close customer support.

After achieving market acceptance in Adama, the service will expand to **Addis Ababa, other cities in Oromia, and additional regions across Ethiopia**.

The long-term vision is to make EthioBiz OS accessible to SMEs throughout Ethiopia and support nationwide digital transformation of small businesses.

4.3 Who are our main competitors?

The Ethiopian market currently includes several alternatives for business management and record keeping, including:

Healthcare & Pharmacy Software

TenaPharmaSoft (by Ahaduweb Solutions): This system is exclusively used in **pharmacies** and hospital dispensaries from **Addis Ababa** to provide clinical drug inventory tracking and expiry monitoring, though its complex medical workflow is too rigid and over-engineered for fast-paced restaurants or mini-markets.
PharmaPOS (by MedSoftwares): This solution is designed specifically for community retail **pharmacies** and drug stores across **Ethiopia** to offer fast checkout and loose-tablet unit sales, but it completely lacks the recipe management and raw ingredient tracking required by food services.

Multi-Sector & Retail ERP Systems

MarakiPOS / MarakiERP: This platform is widely used in **restaurants**, hotels, cafes, and **supermarkets** from **Addis Ababa** to deliver high-speed barcode scanning and table management layouts, but its traditional system architecture is highly complex to configure for medical pharmacy regulations.
Zoorya ERP: This cloud-hybrid software is used in **mini-markets**, **supermarkets**, and broad retail businesses across major cities like **Addis Ababa, Adama, and Awasa** to manage automated Ministry of Revenue tax compliance, but it lacks dedicated restaurant floor-mapping tools and specialized pharmacy prescription logs.

Senet ERP

parse

Inventory and POS Management Systems

Manual Record Keeping (Paper-Based Systems)

Microsoft Excel

Some businesses use spreadsheets to track sales and inventory information.

Customer interviews showed that some businesses using existing ERP or POS systems appreciate their functionality but still experience limitations. For example, one pharmacy mentioned that their current software performs many tasks but does not provide direct supplier connection features. Many other businesses reported that paper-based systems consume significant time and increase the possibility of errors.

4.4 Why will customers choose our business?

Customers will choose EthioBiz OS because it provides a solution specifically designed around their needs and challenges.

The main reasons include:

- It is developed based on real problems identified through customer research.
- It works effectively on smartphones, eliminating the need for expensive computers.
- It supports offline usage where internet access is unreliable.
- It supports Afaan Oromoo, Amharic, and English languages.
- It provides affordable pricing suitable for SMEs.
- It is simple and requires minimal training.
- It provides responsive customer support and assistance.
- Future features such as supplier integration, AI Business Assistant, Digital Payment Integration, and Business Analytics will allow businesses to manage their operations from a single platform.

Market validation was conducted through customer interviews with **20 businesses in Adama**, including **9 mini-markets, 4 supermarkets, and 7 pharmacies**. The feedback showed strong demand for a business management solution that is simple, smartphone-based, offline-capable, and affordable.

EthioBiz OS is positioned to meet this demand by providing a practical digital solution designed specifically for Ethiopian SMEs.

5. Business Model (how we make money)

5.1 How will the business generate income?

EthioBiz OS will operate using a **Software as a Service (SaaS)** business model, where customers pay monthly or annual subscription fees to access the platform. This model allows customers to continuously receive software improvements, technical support, security updates, and new features.

During the initial phase, EthioBiz OS will focus on mini-markets, supermarkets, and pharmacies. As the number of customers increases, recurring revenue from monthly and annual subscriptions will become the main source of income and support the long-term growth of the business.

The SaaS model provides a sustainable revenue structure because it creates continuous income while allowing the company to improve and expand its services over time.

5.2 What are our main revenue sources?

EthioBiz OS will generate revenue from the following sources:

1. Monthly Subscription (Primary Revenue Source)

Customers will pay a monthly fee to use the software based on their business needs.

The subscription plans will include:

- **Basic Plan:** Designed for small businesses with essential features.
- **Standard Plan:** Designed for medium-sized businesses requiring additional management capabilities.
- **Premium Plan:** Designed for larger businesses and businesses with multiple branches.

2. Annual Subscription

Customers who pay for a full year in advance will receive discounted pricing. This approach helps create predictable long-term revenue and encourages stronger customer retention.

3. Setup and Installation Fees

A one-time setup fee will be charged for services such as:

- Software installation and configuration.
- Account setup.
- Initial business data entry.
- Customer onboarding support.

4. Training Services

Additional revenue will be generated by providing specialized training services for businesses that require employees to be trained on how to effectively use the system.

5. Custom Software Development

Businesses with unique requirements will have the option to request customized features or integrations. These additional development services will generate extra revenue.

5.3 What are our main costs?

The major startup and operational costs of EthioBiz OS include:

Technology Costs

These costs are related to developing and maintaining the software platform:

- Software development.
- Cloud server and database services.
- Domain and hosting services.
- Software maintenance and security improvements.

Operational Costs

Daily business operation expenses include:

- Internet services.
- Transportation for customer visits.
- Customer support activities.
- Office expenses as the business expands.

Marketing Costs

To attract and acquire customers, the business will invest in:

- Social media marketing.
- Printed promotional materials.
- Product demonstrations.
- Customer acquisition activities.

Human Resource Costs

As the business grows, expenses will include:

- Software developers.
- Technical support staff.
- Sales and marketing employees.

The startup capital expected from the kefeta SACCO **(350,000 ETB)** will mainly be invested in software development, technology infrastructure, customer acquisition, and marketing activities. During the early stage, the business will prioritize product development and customer growth rather than unnecessary office expenses or physical assets.

6. Use of Digital Tools

EthioBiz OS will extensively use digital tools to develop its product, deliver services, manage customers, and operate the business efficiently.

6.1 Product delivery and operations

Since EthioBiz OS itself is a digital solution, customers will access the platform through their smartphones to manage their businesses.

The system will allow customers to:

- Digitally record business transactions.
- Manage inventory, sales, expenses, profits, and reports.
- Access important business information more efficiently.

The software will support offline functionality, allowing users to continue working without internet access. When internet connectivity becomes available, data synchronization and backup processes will ensure information safety.

6.2 Digital marketing

EthioBiz OS will use digital marketing channels to promote the product, attract new customers, and build relationships with SMEs.

The main digital marketing platforms include:

- Facebook
- Telegram
- TikTok
- LinkedIn
- Business website
- WhatsApp Business

These platforms will be used for product awareness, customer education, promotional campaigns, and communication with potential customers.

6.3 Customer support

To provide fast and reliable customer assistance, EthioBiz OS will use digital communication tools including:

- WhatsApp Business
- Phone Support
- Email Support
- Remote Assistance Tools

These channels will help customers receive technical support, report issues, and get guidance on using the system effectively.

6.4 Digital payments

To make subscription payments and service payments easier for customers, EthioBiz OS will support digital payment methods such as:

- Telebirr
- CBE Birr
- Commercial Bank of Ethiopia (Bank Transfer)
- Other available digital payment platforms

Digital payment integration will improve payment convenience and support efficient revenue collection.

6.5 Internal business management

EthioBiz OS will also use digital tools to manage its own internal operations, including:

- Customer records management.
- Sales records.
- Financial records.
- Project management.
- Document storage.

Using digital management tools will make internal operations more organized, efficient, and scalable.

7. Operations Plan

7.1 Where Will the business operate?

EthioBiz OS will initially operate in **Adama City**. Software development, customer support, and business management activities will be conducted from a small home office during the early stage.

Since customers can access and use the software directly through their smartphones, the service is not limited to a specific physical location. This allows EthioBiz OS to serve customers efficiently without requiring a large physical office at the beginning.

As the business grows, operations will expand to **Addis Ababa, other cities in Oromia, and additional regions across Ethiopia**. In the future, the company plans to establish a dedicated office to support customer service, training, and wider business operations.

7.2 What inputs or raw materials does the business require, and where will we source them?

Since EthioBiz OS is a software-based business, it does not require physical raw materials like manufacturing businesses. However, the business depends on several digital resources and services to operate continuously.

The main required resources include:

- Cloud hosting services.
- Domain name services.
- Internet services.
- Electricity supply.
- Laptops and smartphones.
- Software development tools.
- Digital payment service providers.
- Backup and cloud storage services.

These resources will be obtained from reliable technology providers, internet service providers, and digital payment companies through stable service agreements. This approach ensures continuous service delivery without major interruptions.

7.3 What equipment or materials do we need?

The main equipment required for starting and operating EthioBiz OS includes:

- Laptop for software development and business operations.
- Smartphone for application testing.
- Reliable internet connection.

- Cloud server infrastructure.
- Domain and hosting services.
- Office desk and chair.
- Printer for documents and contracts.
- Backup storage solutions.
- Office stationery.

These resources will support software development, testing, customer support, and daily business activities.

7.4 What are the key steps/procedures to deliver our product or service?

The service delivery process of EthioBiz OS will follow these steps:

1. Register new customers.
2. Understand the customer's business needs and requirements.
3. Install and configure the software account.
4. Enter initial business information such as products, stock, and business details.
5. Provide basic user training.
6. Launch the software for daily business operations.
7. Provide customer support and technical assistance.
8. Perform regular software updates and maintenance.
9. Collect customer feedback and improve existing features.

This process ensures that customers can easily adopt the system and receive continuous value from the service.

7.5 Who will be involved?

During the initial stage, the founder will manage and oversee the main business activities, including:

- Software development.
- Customer support.
- Marketing.
- Business management.

As the customer base grows and the business expands, additional employees will be recruited, including:

- Software Developers.
- Technical Support Officers.
- Sales and Marketing Officers.
- Customer Success Officers.
- Finance and Administration Officers.

The business will also work with freelancers and consultants when specialized skills are required.

8. Marketing and Sales Strategy

8.1 How will we attract customers?

EthioBiz OS will use a combination of affordable and effective marketing strategies to acquire its first customers and grow the customer base.

Direct sales

During the initial stage, the company will directly visit mini-markets, supermarkets, pharmacies, and other SMEs to demonstrate the software through live product demonstrations.

Allowing potential customers to see how the system works in their own business environment will increase understanding and support purchasing decisions.

Customer referrals (word of mouth)

Satisfied customers will be encouraged to recommend EthioBiz OS to other businesses. Customer referrals provide a cost-effective way to acquire new customers while building trust in the market.

Social media marketing

EthioBiz OS will use digital platforms such as:

- Facebook
- Telegram
- TikTok
- LinkedIn
- WhatsApp Business

These platforms will be used to:

- Promote the software.
- Share educational videos and tutorials.
- Publish customer success stories.
- Announce updates and new features.

Partnerships

The business will build partnerships with:

- Business associations.
- Universities.
- Entrepreneurship programs.

- Organizations supporting SMEs.

These partnerships will help reach more potential customers and increase market awareness.

Free demonstration and trial

Interested businesses will be offered a limited free trial or demonstration period. This will allow customers to experience the benefits of the software before making a purchase decision.

8.2 How will we we retain customers?

EthioBiz OS will focus on providing continuous value and strong customer relationships to ensure long-term customer retention.

Excellent customer support

Customers will receive quick assistance through:

- WhatsApp support.
- Phone support.
- Email support.

The company will prioritize solving customer problems quickly and effectively.

Continuous product improvement

Customer feedback and suggestions will be collected regularly and used to improve the software. New features will be developed based on customer needs and market requirements.

Regular software updates

The platform will receive regular updates to improve:

- Security.
- Performance.
- User experience.
- Available features.

Customer training

Initial training and user guidance will be provided to ensure customers can effectively use the software and gain maximum benefit.

Building Long-Term Relationships

EthioBiz OS considers customers as long-term business partners rather than only users. Through trust, quality service, and continuous communication, the company aims to build strong relationships with customers.

The goal is not only to sell software but also to help SMEs improve their operations and grow their businesses through digital transformation.

9. Financial Plan (SACCO Requirement)

9.1 Startup Costs

Item / Equipment	Quantity	Unit Cost (ETB)	Total Cost (ETB)	Notes
High Performance Laptop	1	85,000	85,000	Software development
Domain & Hosting Services (1 Year)	1	8,000	8,000	Website and business email
Cloud Server & Database Services	1	15,000	15,000	First-year cloud infrastructure
Software Development Tools	1	12,000	12,000	Development software and licences
Internet & Communication Setup	1	10,000	10,000	Internet and communication
Marketing & Customer Acquisition	1	40,000	40,000	Branding, demonstrations and promotion
Transportation	1	10,000	10,000	Customer visits and field work
Working Capital	1	130,000	130,000	Initial operating expenses

TOTAL STARTUP COST = ETB 310,000

9.2 Monthly Operating Costs

Expense Category	Description	Monthly Cost (ETB)
Internet & Communication	Internet, phone and customer support	3,000
Cloud Server & Database	Cloud hosting services	3,000
Marketing & Promotion	Social media, demonstrations and advertising	5,000
Transportation	Customer visits and meetings	5,000
Software Maintenance	Updates, bug fixing and technical support	4,000
Miscellaneous	Other operational expenses	3,000

TOTAL MONTHLY OPERATING COST = ETB 23,000

9.3 Monthly Revenue Estimate

Assumption: The average subscription fee is **ETB 1,000 per customer per month**.

Product / Service	Unit Price (ETB)	Quantity per Month	Total Revenue (ETB)
Monthly Software Subscription	1,000	56 Customers	56,000
Setup Fee	-	-	-
Training Service	-	-	-

TOTAL MONTHLY REVENUE = ETB 56,000

9.4 Profit Estimate

Description	Amount (ETB)
Total Monthly Revenue	56,000
Total Monthly Operating Costs	23,000
Operating Profit	**33,000**
Monthly Loan Repayment	13,880
Estimated Net Profit	**19,120**

9.5 Loan Request & Use of Funds

Use of Loan	Amount (ETB)
Technology Equipment	85,000
Cloud Infrastructure & Software Tools	35,000
Marketing & Customer Acquisition	40,000
Transportation	20,000
Working Capital	130,000

TOTAL LOAN REQUESTED = ETB 310,000

9.6 Loan Repayment Plan

Loan Amount: ETB 310,000

Interest Rate: 7% per annum

Repayment Period: 24 months

Month	Expected Revenue (ETB)	Operating Costs (ETB)	Loan Repayment (ETB)	Estimated Net Profit (ETB)
Month 1	18,000	23,000	13,880	-18,880
Month 2	30,000	23,000	13,880	-6,880
Month 3	40,000	23,000	13,880	3,120
Month 4	48,000	23,000	13,880	11,120
Month 5	56,000	23,000	13,880	19,120
Month 6	65,000	24,000	13,880	27,120
Month 12	95,000	32,000	13,880	49,120
Month 24	140,000	45,000	Fully repaid	81,120

10. Risk Analysis

10.1 What are the main risks to our business?

As a startup software company, EthioBiz OS may face several potential risks, including:

1. Low customer adoption risk

Some businesses may hesitate to adopt new software because they are comfortable with traditional paper-based systems or existing methods.

2. Strong competition risk

Existing business management software solutions such as Senet ERP and other POS systems may create competitive pressure in the market.

3. Technical risk

Software problems such as bugs, system downtime, or data loss could affect customer operations and reduce trust in the platform.

4. Financial risk

During the early stage, the number of customers may be limited, resulting in lower revenue and creating challenges in covering business expenses.

5. Internet and power interruption risk

Unstable internet connectivity and electricity interruptions in some areas may affect software usage and customer experience.

6. Cybersecurity and data privacy risk

Since EthioBiz OS manages important business information, cybersecurity threats such as unauthorized access or data breaches could affect customer trust and business reputation.

10.2 How will we manage or reduce these risks?

EthioBiz OS will implement the following strategies to minimize potential risks:

Customer adoption management

To encourage adoption:

- Develop a simple and user-friendly software interface.
- Provide free demonstrations and initial training.
- Offer responsive and continuous customer support.

Competition management

To compete effectively:

- Focus specifically on the needs of Ethiopian SMEs.
- Provide unique advantages such as offline functionality, multilingual support, and affordable pricing.
- Continuously improve the product based on customer feedback.

Technical risk management

To maintain reliable service:

- Conduct regular software testing and quickly fix bugs.
- Use backup and data recovery systems.
- Perform regular maintenance and software updates.

Financial risk management

To maintain financial stability:

- Carefully control startup and operational expenses.
- Use the subscription model to create recurring revenue.
- Continuously invest in marketing and customer acquisition.

Internet and power risk management

To reduce infrastructure challenges:

- Design the software to operate offline.

- Enable automatic data synchronization when internet connectivity becomes available.

Cybersecurity risk management

To protect customer information:

- Implement secure authentication systems.
- Use data encryption and regular backups.
- Apply access control mechanisms to protect sensitive business information.

By continuously monitoring risks and applying effective solutions, EthioBiz OS aims to maintain reliable operations, build customer trust, and achieve sustainable business growth.

11. Implementation Timeline

The implementation of EthioBiz OS will follow a phased approach to ensure successful product development, customer acquisition, and sustainable business growth.

Month	Key Activities	Expected Output
Month 1	Register the business, purchase required equipment, establish the workspace, begin software development, and finalize MVP planning.	Business legally established, development started, and MVP under development.
Month 2	Complete MVP development, conduct system testing, fix technical issues, prepare marketing materials, and onboard pilot customers.	Business launched and first customers acquired.
Month 3	Deploy the software for early customers, provide user training, collect feedback, and improve the system.	Regular operations started and initial revenue generated.
Month 4	Expand marketing activities, visit additional businesses, improve customer support, and introduce improvements based on feedback.	Stable operations and early business growth achieved.
Month 5	Increase customer acquisition through referrals, partnerships, and digital marketing while continuing product improvement.	Increased customer base and higher software adoption.
Month 6	Strengthen customer retention, optimize internal operations, evaluate financial performance, and begin regular loan repayment.	Improved efficiency, consistent revenue, and loan repayment started.

Long-term focus (after month 6)

After the first six months, EthioBiz OS will continue expanding into additional cities across Ethiopia. The company will introduce advanced features including:

- AI Business Assistant.
- Supplier Management.
- Digital Payment Integration.

- Business Analytics.

The business also plans to recruit additional employees to support the growing customer base and strengthen operations.

12. Expected Impact

12.1 Will Your Business Create Jobs (for Yourself or Others)?

Yes. EthioBiz OS will initially create full-time self-employment for the founder. As the business grows and the customer base increases, additional employment opportunities will be created for software developers, technical support staff, sales and marketing officers, customer service representatives, and administrative personnel. The business will also collaborate with freelancers, trainers, and technology partners whenever specialized expertise is required.

12.2 How Will It Improve Your Income or Community?

EthioBiz OS will generate sustainable income through software subscriptions, setup services, training, and custom software development. As the number of customers increases, the business will expand its revenue and create additional employment opportunities.

For the community, EthioBiz OS will help small and medium enterprises (SMEs) improve their business operations by replacing paper-based record keeping with a simple digital system. The software will enable business owners to manage inventory, sales, expenses, profits, customer credit, suppliers, and business reports more efficiently. This will reduce errors, save time, improve decision-making, and increase business profitability.

In addition, the business will contribute to Ethiopia's digital transformation by providing an affordable, smartphone-friendly, and offline-first business management solution designed specifically for local SMEs. As more businesses adopt digital tools, productivity, business growth, and economic development within the community are expected to improve.

Appendix

Appendix A – Customer Interview Summary

Business Type	Interviewed	Findings
Mini-market	9	Need stock, sales, expense and profit management.
Supermarket	4	Some use Parse/Dagon/POS; interested in testing a better system.

Appendix D – SWOT Analysis

Strengths

- Offline-first
- Smartphone friendly
- Local language support
- Customer interviews completed
- Affordable pricing

Weaknesses

- New startup
- Small team
- Limited funding
- Product still under development

Opportunities

- Increasing digital transformation in Ethiopia
- Growing SME sector
- Government support for entrepreneurship
- Limited affordable SME software

Threats

- Existing competitors
- New competitors
- Economic instability
- Slow technology adoption

Appendix E – Founder Profile

Founder: Megersa Tekalign is a fourth-year Computer Science and Engineering student at Adama Science and Technology University (ASTU). I'm passionate about software development and entrepreneurship, with a vision to build digital solutions that solve real business challenges for Ethiopian small and medium enterprises (SMEs). Through customer interviews and market research, he identified the need for a simple, affordable, and offline-first business management system tailored to the Ethiopian market.

Appendix F – Future Roadmap

Year	Milestone
Year 1	Launch MVP and acquire first paying customers
Year 3	Expand across major Ethiopian cities
Year 5	Add AI Assistant, Supplier Integration, Digital Payments and Analytics
Year 10	Become Ethiopia's leading SME Operating System
